

RealTime Graphing Software

With an ACR Data Logger and our RealTime Graphing Software, you can view realtime data as it happens.

Run the ACR RealTime Graphing Software while TrendReader® or POWERWATCH® Software for Windows® is running to view the realtime data in a graphical format. Realtime graphing allows you to visually detect potential problems before they turn into disasters. Since ACR Data Loggers accumulate historical data, you can still look back and analyze logged information.

Data accumulated by RealTime Graphing Software can be saved for later use, exported to ASCII formats for spreadsheet programs such as Excel® and Lotus®. Alarm thresholds can be set to trigger audio and visual alarms or run an alarm macro to simulate any keystrokes on your computer.

Features

- Compatible with these ACR Data Loggers:
 - SmartReader
 - Smartreader Plus
 - POWERWATCH
- Will work with any ACR remote or local data logger networks
- Multi-channel display
- Settable alarm thresholds
- Create custom alarm macros

RTM-WIN	RealTime Graphing Software (Requires TrendReader® for Windows®).	01-0073

Optional Software Solutions

Talk-Back Software

ACR Talk-Back Software automatically downloads logged information and responds to SmartReader Plus alarms.

Autobackup Feature

Talk-Back Software can be setup to download logged data from any ACR SmartReader Plus Data Logger that is located on a local or remote ACR data logger network. It will call the logger by modem or contact the logger if on a local network, download the logged information, and save it to your hard drive at a user-set interval. This will prevent you from having to manually backup logged data when the logger's memory becomes full.

Alarm Indicating Feature

Talk-Back Software can be setup to receive all tripped alarms that are setup in the SmartReader Plus Data Logger. When the logger measures an exceeded value on any of its channels, the logger will call the computer with the Talk-Back Software installed. Talk-Back will then run an alarm macro that has been user-set. Macro options include sounds, visual alarms, running of other programs, and calling a pager or cell phone with Caller ID capability.

Note: Compatible with SmartReader Plus Data Loggers with a serial number of 42,508 or higher.
